

FAMOUS FREEMASONS

READ ME FIRST

The **Famous Freemasons** presentation from the Visual Aids Group has been made into a self playing file. This means that no other computer program is required other than than Microsoft Windows.

Before running a presentation to other people try the programs out on your computer. They are formatted to the 800 x 600 screen size. Should you wish the size can be easily set using the normal method. (see below). All this means is at greater screen dots a black border is present, and this does not show on the data projector screen.

First Method

1. Place CD Rom in drive (taken as 'D' for this example).
2. Choose My Computer Double click
3. Choose D: Double click
4. Choose a 'Famous Freemasons' file Double click

The program will load and run automatically
"Esc" key will stop presentation automatically

Second Method

The program runs quite satisfactorily from the CD Rom, however, you are entitled to load it on to your hard drive, and put a short cut on your desktop so it can run from its own icon.

2 Versions – continuous (Loop) and Once through

There are 2 versions on the CD, the one with "Loop" in its name is a continuous presentation suitable for shows, demonstrations etc. Having run right through, it waits for 30 seconds and then starts again. To stop it the "ESC" key is used.

The second one stops after it has gone through to its end, and does not restart. This is better for evening display as it does it automatically.

Changing Screen to 800 x 600 (& back)

1. Right Mouse Click on Windows Desktop Right Click
2. Choose Properties Left Click
3. Choose Settings Tab on Display Properties Left Click
4. Slide Slider on Screen area box until 800 x 600 shows Hold & Slide
5. Press "OK" button Left Click
6. Press "Yes" button Left Click
7. Run Program

Do above but select the original size option, to return to the previous setting after showing.
